## Abstract of the Disclosure

A personal information collection and delivery system has a collection component executed by a first enterprise, for collecting information for specific individuals from a plurality of information provider's sites, an aggregation component executed by the first enterprise, for aggregating and storing the collected information identified for individual ones of the specific individuals; and a plurality of delivery components executed by a like plurality of second enterprises, for delivering said aggregated information to the specific individuals. This system is characterized in that delivery is distinguished to individual ones of the second enterprises. In some cases the information providers are the second enterprises that manage delivery, in which case they may limit access according to a variety of variables. Also in some cases the providers also provide transactions services, and the specific individuals connecting through the system may accomplish transactions, which may include dragand-drop implementation.
